PART 3 – EXECUTION

3.1
EXAMINATION
   A) Prior to commencing installation, verify governing dimensions of building and condition of substrate.
3.2
**PREPARATION**
A) Examine, clean and repair as necessary any substrate conditions which would be detrimental to proper installation.
B) Do not begin installation until unacceptable conditions have been corrected.

3.3
**INSTALLATION**
A) General: Install products in accordance with the latest printed instructions of the manufacturer, with all components true and plumb.
B) Nailing: Nail horizontal panels by placing nail in center of slot. Nail vertical panels by placing first nail at top of top slot and remaining nails in center of slots. Drive nails straight, leaving 1/16 inch space between nail head and flange of panel.
C) Stapling: Staple horizontal panels by resting head of stapler onto nail hem. Shoot staple legs into the center and top of nail slots, leaving 1/16 inch space between the staple crown and flange of panel.
D) Spacing: Allow space between both ends of siding panels and trim for thermal movement. Overlap horizontal panel ends one-half the width of factory pre-cut notches.
E) Joints in Horizontal Siding: Stagger lap joints in uniform pattern as successive courses of siding are installed.
F) Joints in Vertical Siding: Install J-channel and flashing to accommodate successive courses of vertical siding. Install wood shims at building corners to bring cut edges of vertical siding out to correct plane.

3.4
**CLEANING**
A) At completion of work, remove debris caused by siding installation from project site.
